

**Brick Laying & Masonry**

## **Brick Masonry**

Bricks provide aesthetic appeal and strength, with many styles available. The staggered layering technique ensures stability. A guiding line is held by blocks to maintain straight rows. Each brick is set with mortar, tapped into place, and secured. This process is repeated until the structure is completed.

## **Stone Masonry**

Stone masonry comes in two types: dressed, where stones are cut neatly for a uniform look. And also undressed, which retains a more natural appearance. Stone masons carefully plan the layout before construction. The process starts with a strong foundation and a precisely measured cornerstone. Stones are fitted together to create a structurally sound and visually appealing finish. Though time consuming, stone masonry can offer unmatched durability and beauty.

## **Cavity Wall Construction**

By adding cavity walls this will greatly improve insulation and moisture resistance by creating a gap between the interior and exterior walls. This should prevent dampness whilst enhancing both thermal efficiency and soundproofing. A layer of insulation is placed within the gap to reduce heat loss, making this method energy-efficient and durable.

## **Structural Masonry, Fit-outs & Refurbishments**

We provide expert masonry solutions for structural projects, refurbishments, and fit-outs, ensuring high-quality craftsmanship.
